# Shuolin (Leo) Yin

+1 (647) 674-6127 | leo.yin@mail.utoronto.ca GitHub | Website | LinkedIn

#### EDUCATION

#### University of Toronto

Toronto, ON

Bachelor of Applied Science and Engineering in Computer Engineering + PEY Co-op

Sep 2023 - Apr 2027

- Recipient of Faculty Of Applied Science And Engineering Scholarship
- Recipient of Edward S. Rogers Sr. Scholarship

### Experience

#### Vector Institute & University Health Network — WangLab

Toronto, ON

Undergraduate Researcher (supervised by Prof. Bo Wang; advised by Dr. Jun Ma)

May 2025 - Present

- Pretrain and finetune foundation models for multi-task, multimodal learning on large-scale 2D/3D medical datasets.
   Serve on the Organizing Committee for MICCAI FLARE 2025: define tasks, rules, and evaluation protocol; lead and
- release 3 baseline models (qwen2.5&3 -vl, medgemma) with dockerized framework and data preprocessing pipelines
- Develop an MLLM framework for pathology report generation on gigapixel whole-slide images, implementing multi-scale feature extraction and vision-language alignment over 10,500+ multicenter cases
- Pretrain a DINOv3 SSL model on 300M pathology tiles across 39 cancer types on H100 clusters (DDP/NCCL/Slurm), yielding strong downstream gains for retrieval and report tagging.
- Author an educational framework paper on medical vision—language model development (MICCAI Educational Challenge finalist), providing end-to-end "cookbook" guidelines from architecture design to clinical deployment

  • Design and benchmark experiments on HPC clusters; contribute code, figures, and findings to lab publications

## The Institute of Automation, Chinese Academy of Sciences — NLPR

Beijing, China

Research Assistant (supervisors: Prof. Yang Yang, Prof. Jinlin Wu; Prof. Zhen Chen)

Feb 2024 - Sep 2024

- Streamlined research on Medical multimodal large language models (MLLMs) through systematic literature review and novel experimental design, developing methodology for TPAMI submission
- Engineered an end-to-end data pipeline for medical imaging benchmark creation, incorporating automated quality checks and custom annotation tools, resulting in 75% reduction in processing time and 40% improvement in annotation accuracy

  • Built a PyTorch-based multimodal evaluation suite for clinical VLM (accuracy, robustness, cross-modal consistency)
- and automated report scoring, cut manual evaluation time by 30% and enabled weekly model iteration
   Facilitated cross-functional collaboration between medical experts and ML researchers through technical discussions

VolunTrack Org. Toronto, ON

President/Founder

Jun 2022 - Sep 2024

- Founded and scaled a non-profit organization with a structured five-tier management system; grew to 50+ members and partnered with 100+ non-profits; reached 500+ MAU.
- Architected an AI-powered volunteer matching system using TensorFlow and scikit-learn, achieving 85% matching accuracy and reducing manual matching time by 70%
- Implemented real-time analytics using Firebase, Cloud Firestore, and TensorFlow.js, deploying ML models for volunteer engagement prediction and churn analysis across 100+ organizations
- Established AI innovation program, leading to 30+ successful ML projects and 10+ conference speaking engagements

### Projects

### EZ-Career – Autonomous AI Job Application Agent

Toronto, ON

AI Engineer & Full Stack Developer

April 2024 - June 2024

- Architected a state-of-the-art multi-agent AI system using OpenAI Agents SDK with an Agent-as-Tool pattern, orchestrating specialized agents for end-to-end job application automation
- Developed multiple custom Model Context Protocol servers (playwright\_mcp, user\_assistance\_mcp,
- memory\_mcp...) providing specialized tools for browser control, database operations, and agent memory management Engineered a RAG memory system using Sentence Transformers and Supabase RPC with Human-in-the-Loop

# Echo – AI-Powered Sustainable Fashion Marketplace

design to prevent hallucination and ensure factual consistency across applications

Global

Lead Developer

March 2025

- Sole developer; won BCG & Global Spark Hack the Globe (1st in Canada, 2nd globally) with an AI-powered mobile marketplace for sustainable second-hand fashion within 48 hours
- Developed an AI stylist agent using OpenRouter and RAG for personalized recommendations, integrated with a swipe-based discovery interface powered by GCP Analytics and Multimodal LLMs
- Shipped vision-based item verification & condition grading using YOLOv11n (defect detection: stains/tears/pilling), automating quality assurance and flagging brand/label mismatches, achieved 90% accuracy on verification set

  • Built full-stack application using React Native, Node.js/Express, and PostgreSQL with JWT and Zod validation

#### Skills

es: Python, C/C++, MATLAB, JavaScript, Typescript, C#, HTML, Swift, SQL, Bash, LaTeX PyTorch, TensorFlow, Hugging Face, OpenCV, YOLO, LangChain, scikit-learn GCP, AWS, HPC clusters, Multi-GPU Clusters, Docker, Firebase, Git, CI/CD Vertex AI, Weights & Biases, Jupyter, MLflow, Xcode, React/React Native, Node.js/Express Programming Languages: ML/DL Frameworks: Cloud Infrastructure: Research/Dev Tools:
