Application/Software Developer Co-op – Enterprise Technology & Business Management

Dear Hiring Manager,

I am a third-year Computer Engineering student at the University of Toronto, excited to apply for the Application/Software Developer Co-op position within CIBC's Enterprise Technology & Business Management team. With hands-on experience building cross-functional, multi-platform systems, I am eager to contribute to CIBC's digital transformation.

At Medical3.ai, I architected systems coordinating across multiple workflows, collaborating with stakeholders to translate business requirements into technical specifications, reducing research time by 70%. At Lumi AI, I shipped a full-stack platform with Node.js and PostgreSQL, implementing authentication and audit logging for sensitive data. These experiences have prepared me to develop, test, and support the reliable applications that enterprise technology demands.

I thrive taking ownership in collaborative environments. Whether coordinating with clinicians at Vector Institute or leading a team to 2nd place globally at BCG Hack the Globe, I bring both technical depth and the communication skills to work effectively across teams. I am drawn to CIBC's values of trust, teamwork, and accountability, and would welcome the opportunity to discuss how I can contribute to your technology initiatives.

Thank you for considering my application.

Best regards,

Shuolin (Leo) Yin
